GUIDE FOR CODING STREET ADDRESS
TO COMMUNITY AREA AND CENSUS TRACT
CHICAGO, 1960

Chicago Community Inventory
University of Chicago
May 1961

PREFACE

This revised Guide for Coding Street Address to Community Area and Census Tract; Chicago, 1960 brings up to date a useful tool, initiated at the University of Chicago in the 1930's, for working with data for small areas within the City of Chicago. It permits the expeditious allocation of any information, for which a street address is available, to the appropriate census tract or community area by eliminating the need to locate the address on a map.

The compilation of various types of information by community area and census tract makes possible their analysis against the rich background of 1960 Census of Population and Housing statistics; and also facilitates relating the series of data to each other. Furthermore, the collation of data by community area or census tract provides a comprehensive picture about individual communities or neighborhoods within the city. The analytical value of such a procedure and its usefulness for planning and administrative purposes have been demonstrated many times by agencies in local government, in health and welfare, in civic activities, in business, and in a wide variety of educational and research enterprises. Selected census tract information from the 1960 Censuses of Population and Housing, in addition to appearing in Census publications, will be summarized in a Local Community Fact Book for 1960 paralleling those previously published through the University of Chicago after each census since 1930.

This publication is one of a series resulting from the cooperation of the Chicago Community Inventory with various agencies of the City of Chicago and local business, civic and welfare groups. More specifically this Guide has been compiled under a cooperative agreement with the Department of City Planning of the City of Chicago. The full cooperation of Commissioner Ira Bach, Deputy Commissioner Clifford Campbell and Director of Research Paul Zimmerer and their colleagues is gratefully acknowledged. The assistance of the Chicago Board of Health in making a consistency check of community area and tract numbers is also gratefully acknowledged. The preparation and publication of this Guide have been under the supervision of Dr. Evelyn M. Kitagawa, Research Associate, with the assistance of John Grundy, Doohee Kim and Eric McDonald.

The Census of 1960 will be the first in which the Population and Housing Census results will be available on a current basis for the entire metropolitan area. For this reason census tract and community area information will be particularly valuable; and street address coding guides will become even more useful tools than they have been in the past.

Philip M. Hauser, Director
Chicago Community Inventory

University of Chicago
May, 1961

TABLE OF CONTENTS

EXPLANATION AND USE OF GUIDE

This Street Address Coding Guide is designed to assign any street address in the City of Chicago to the census tract and the community area in which it falls, according to the 1960 Census of Population and Housing. It therefore makes unnecessary the location of a given address on a map of Chicago in order to allocate it to the proper census tract or community area. Rather, the coding guide provides a complete list of street names and a listing of ranges of addresses under each street name, a separate range being shown for each census tract in which the street exists.

The Census Tract Grid

City limits and boundaries of census tracts and community areas within the city are those used in the 1960 Census of Population and Housing. Census tracts are more or less permanent geographical subdivisions of the city adopted by the Bureau of the Census for statistical reporting. Community areas are combinations of census tracts and most of them are also historical entities having, in the main, histories of their own as communities, commonly recognized names, and an awareness on the part of their inhabitants of some common interests. Each decennial census of the United States provides tabulations of census data by census tracts. Census and other statistics for community areas of Chicago have been made available each decade in a Local Community Fact Book.

For the 1960 Census, the City of Chicago was divided into 867 census tracts and 76 community areas. Because of revisions in the census tract grid for Chicago in the 1960 Census, this coding guide will not correctly allocate street addresses to census tracts used in the 1950 and earlier censuses. Although most of the 1960 revisions in the tract grid involved combinations of small census tracts or splits of large tracts, there were some shifts in boundaries between census tracts necessitated by changes in the street pattern of the city--for example, vacated streets, newly constructed expressways, the demolition and construction of housing and institutional structures, etc. A report on the comparability of 1950 and 1960 census tracts will be published later. The accompanying map of Chicago shows the general 1960 boundaries of census tracts and community areas. A list of census tracts grouped by community areas is also provided (see Table of Contents).

Street Address Pattern

For purposes of assigning addresses, the City of Chicago is divided by two base lines--Madison Street and State Street. East and West Madison Street is the zero point for all streets running north and south; North and South State Street is the zero point for all streets running east and west. Street addresses begin with 1 at these base lines and run uniformly from them in the direction shown toward the city limits. Thus, the suffix N., S., E., or W., shown with each street name, indicates the direction which the street runs from the base line. The direction assigned to a diagonal street indicates whether it

utilizes street addresses in the north-south or east-west numbering pattern.

In general, a range of 800 numbers represents a distance of 1 mile, and a range of 100 numbers a distance of 1/8 mile. The chief exceptions to this rule are the miles between Madison Street and Roosevelt Road (1200 numbers), Roosevelt Road and Cermak Road (1000 numbers), and Cermak Road and 31st Street (900 numbers). Even-numbered addresses are assigned to structures on the north side of streets running east and west, and to structures on the west side of streets running north and south. Similarly, odd-numbered addresses represent structures on the south side of streets running east and west, and structures on the east side of streets running north and south.

General Plan of Coding Guide

Named streets are arranged in alphabetical order in the first part of the coding guide. Streets with addresses running in two directions--for example, north and south--have a separate listing of addresses for each direction. Attention is also called to the existence of several streets with the same proper name which are distinguished only by their street "generic," that is, Avenue, Street, Boulevard, Parkway, etc. For example, there are separate listings of addresses for California Av. N., California Av. S., California Blvd. S., and California Terrace W.

Numbered streets follow the named streets and are arranged in numerical order in the second part of the coding guide. Numbered streets all run east and west, and the number of the street indicates its distance in hundreds south of Madison Street; for example, 39th Street runs east and west at 3900 south of Madison Street.

This revision of the Chicago Coding Guide is designed to anticipate future construction on existing streets by giving the widest possible range of street numbers for each census tract. The format adopted for the 1960 Guide differs from that of the 1952 Guide in that: (1) no attempt has been made to indicate accurately the extent of street interruptions, and (2) it utilizes a different means of distinguishing even and odd street addresses where necessary. The guiding principle in the compilation of the 1960 Guide was to include under each street name the entire possible range of addresses for each census tract in which the street existed for any length at all. This was, of course, a theoretical objective, and there were many situations where irregular tract boundaries or unusual street patterns resulted in the use of narrower ranges of numbers for particular census tracts. In no case should the indicated range of addresses for a census tract extend beyond the tract boundaries. But there are many cases where the range does not extend to the tract boundary--whenever the boundary is not at an easily defined point in the address-numbering system and there are no structures nearby to accurately pinpoint the street address at the boundary. In general, however, the ranges of numbers that are listed under each street name (and direction)

EXPLANATION AND USE OF GUIDE

represent the address limits of the boundaries of successive census tracts in which the street exists regardless of whether or not the street extends throughout the entire length of each of these census tracts. Similarly, the omitted numbers in the ranges of addresses reported under each street represent the ranges for census tracts in which the street does not exist at all, or in some cases portions of the street which lie outside the city limits of Chicago. As a result, this guide should be useful for a considerable period of time except where annexations or new street construction make it out of date, and insofar as street construction represents extensions of streets within census tracts where they existed in 1960 the present guide should still be adequate.

Usually, census tract boundaries are at points which correspond to even hundreds in the street-numbering pattern. When they are not, the exact street address at the boundary point has been determined if possible (see below). If the exact address could not be determined--for example, when there was no structure near the point where the tract boundary crosses the street, or when there was an interruption in the street around the boundary--the street address at the boundary was estimated if it could be done without danger of causing errors in the coding operation, or a range of numbers around the boundary was omitted from the number series listed for the street.

A copy of the official 1960 Census Tract and Block Map prepared by the U.S. Bureau of the Census was used to compile this revised Coding Guide for Chicago. The base map used by the Census Bureau for this purpose was the 23-section map of Chicago prepared by the Department of City Planning of the City of Chicago which had been corrected to show only those expressways in existence as of the census date. Census tract boundaries located on streets (or railroads, rivers, etc.) corresponding to even hundreds in the city's numbering system were assigned in accord with these numbers. Whenever a census tract boundary was not at an "even hundred" location in the address-numbering system, the exact address at the boundary was checked against the detailed block map at the Bureau of Maps and Plats of the City of Chicago, since this map shows the street address of every structure in the city.

How to Use the Coding Guide

Given a particular street address, say 8726 S. Colfax Av., the census tract in which it lies is obtained by first locating "Colfax Av. S." in the alphabetical listing of named streets in the Coding Guide, then locating the address number series which includes 8726, and finally recording the census tract which corresponds to this number series. If the street is a census tract boundary at this point, care should be taken to look for the census tract that includes the correct range of even street numbers. This is not the case in our example, however, as shown in the following excerpt from the Guide which in-

dicates that all street addresses between 8700 and 8899 on S. Colfax Av. are in census tract 668z.

COLFAX Av. S.

7400 - 7899	43-642a
7900 - 8698 even...	46-663
7901 - 8699 odd...	46-664
8700 - 8899	46-668z
8900 - 9499	48-679
9500 - 9699	51-704z

The ranges of numbers listed under each street in the Coding Guide indicate ranges of street addresses. A separate range is listed for each census tract in which the street exists at all (see section above on "General Plan of Coding Guide"). After each range of street addresses is a series of leaders (...) followed by the community area number and the census tract number; for example, all addresses between 8900 and 9499 S. Colfax Av. are in community area 48 and census tract 679. Portions of a street that are census tract boundaries will have separate ranges of numbers listed for even and odd addresses. For example, from 79th to 87th Street, S. Colfax Av. is the boundary between census tracts 663 and 664, and hence there are separate entries for the even and odd addresses between 7900 and 8699. The entry

7900 - 8698 even...46-663

indicates that all even addresses between 7900 and 8698 S. Colfax are in census tract 663. Similarly, the entry

7901 - 8699 odd...46-664

shows that all odd addresses between 7901 and 8699 S. Colfax are in census tract 664. A similar procedure is followed for portions of streets that define city limits. In this case, however, instead of a community area and tract number being shown for the side of the street that lies outside the city, the notation "N.C." is used to indicate which range of addresses lies outside the City of Chicago. Ranges of addresses corresponding to portions of streets that lie entirely outside the city--that is, both sides of which are outside the city--are omitted entirely from the listing of numbers under street names.

Abbreviations Used

In addition to the notation "N.C." mentioned above which appears in place of a census tract and community area number when one side of a street is outside the City of Chicago, the following abbreviations for common generic street terms are utilized in the Coding Guide:

Av. - Avenue	Pl. - Place
Blvd. - Boulevard	Rd. - Road
Ct. - Court	St. - Street
Dr. - Drive	

Assigning Census Tracts to Addresses Not in Guide

Despite efforts to check and recheck the entries in this Coding Guide, it is inevitable that some errors will be found. In addition, the Coding Guide will become out of date as new streets are constructed or changes in street names adopted. Up-to-date information on street name

EXPLANATION AND USE OF GUIDE

changes, street construction, and the existence and location of particular addresses is available in the Bureau of Maps and Plats of the City of Chicago, in their office at City Hall.

In case it is desired to assign a census tract number to a street address that is not listed in this Coding Guide, the following procedure is recommended:

(1) Locate the street on a detailed street map of Chicago, and also locate within a block or two on this street where the specific address should be found. Rand McNally and Company publishes a Chicago Street Guide (including a detailed street map) which can be used for this purpose, since it indicates where each street will be found on the map, in terms of the street-numbering pattern of the city. (The Rand McNally map and Street Guide can be purchased locally at nominal cost.)

(2) Once the general location of the street address is determined, the same location can be identified on the

tract outline map included at the end of the present Coding Guide. For example, if the street address "5962 S. Calumet Av." were not listed in the Coding Guide, the correct census tract could be determined by looking up this street in the Rand McNally Chicago Street Guide and noting that it runs north and south at 344 east. Hence, the census tract in which it is located is the tract that includes the area from 5900 to 6000 south between 300 and 400 east. This general area is easily located on the Rand McNally map using the identification of house numbers for mile streets that appear on the map. Once the general area is located, the census tract boundaries in this area can be drawn on the Rand McNally map; then by reference to the Rand McNally Street Guide the terminal S. Calumet Av. addresses for these census tracts can usually be determined with sufficient accuracy to assign the correct census tract to the given address.
